## PROFILE

Graduate Software Developer with hands-on experience building full-stack, cloud-enabled, and database-driven applications across professional, academic, and client projects. Skilled in C#, .NET, Python, JavaScript, TypeScript, React, SQL, AWS, Azure, REST API development, testing, debugging, and Agile delivery. Experienced in contributing to real software workflows through feature improvements, defect investigation, QA handover, Git-based collaboration, and technical documentation. Known for being a fast learner, clear communicator, and practical problem-solver who enjoys building reliable software for real users.

## TECHNICAL SKILLS

- **Languages:** C#, Python, JavaScript, TypeScript, SQL, Java, HTML, CSS
- **Frontend:** React, TypeScript, JavaScript, HTML, CSS, responsive UI development
- **Backend & APIs:** .NET, ASP.NET Core, REST API design/testing, Python, Node.js fundamentals, Entity Framework
- **Databases:** MS SQL Server, MySQL, Firebase Realtime Database, DynamoDB, NoSQL concepts
- **Cloud & DevOps:** AWS EC2, Lambda, S3, DynamoDB, IAM, Azure, Git, GitHub, GitHub Actions, Docker fundamentals, CI/CD
- **Tools:** Visual Studio, VS Code, Claude, Codex, Cursor, Postman, Jira, Confluence, Azure DevOps, Android Studio, Vercel
- **Practices:** OOP, Agile Scrum/Kanban, debugging, testing, code reviews, pull requests, QA handover, technical documentation

## EXPERIENCE

### Graduate Software Engineer

Aderant | Auckland, NZ
Nov 2025 - Present

- Contribute to enterprise software development across feature improvements, defect resolution, workflow enhancements, and QA-ready delivery.
- Investigate software issues by reproducing bugs, checking edge cases, validating expected behaviour, and documenting clear findings for development and testing teams.

- Support improvements to user-facing workflows, data-driven features, reporting screens, and internal development tooling.
- Contribute to an AI-assisted bug-fixing tool designed to analyse issues across multiple codebases and support reusable automation for development teams.
- Collaborate with developers, testers, product owners, and business stakeholders to understand requirements and deliver maintainable software changes.
- Participate in Agile delivery using Git-based workflows, Azure DevOps task tracking, pull requests, code reviews, testing, and QA handover.

### Software & IT Consultant

Wolfgramm Holdings | Auckland, NZ
Jul 2023 – Nov 2025

- Developed AI-powered automation workflows integrating OpenAI APIs and Zapier, improving task efficiency and response times.
- Designed and maintained scalable, responsive websites.
- Supported cloud-enabled small business systems, including Microsoft 365 onboarding, secure access provisioning, domain/DNS configuration, and user account setup.
- Troubleshot issues across websites, cloud services, email, access permissions, and networking-related systems.

### IT Support Engineer Trainee

Pro IT Solutions | Auckland, NZ
Nov 2022 – Dec 2023

- Automated system maintenance using PowerShell scripts and CMD workflows.
- Provisioned users and devices in Azure Active Directory and Office 365 environments.
- Supported deployment of network infrastructure across 15+ sites, applying Agile and Kanban methodologies to prioritise tasks and manage dependencies.
- Troubleshot connectivity, device access, user account, email, and network-related issues across client environments.
- Gained hands-on exposure to secure file transfer concepts, remote support tools, endpoint setup, basic networking, and infrastructure support processes.

## KEY PROJECTS

### PiLot Autonomous UGV (Capstone Project)

Designed and deployed a real-time telemetry system for an autonomous rover, integrating cloud-based data storage, dashboard visualisation, and system automation.

- Designed and developed a real-time telemetry system for an autonomous rover using Python, AWS EC2, DynamoDB, and a web-based dashboard.

- Built scripts and API-style data flows to collect, process, store, and display telemetry data in near real time.
- Developed a dashboard using HTML, CSS, and JavaScript to support live monitoring and system visibility.
- Worked with sensor data, obstacle detection, cloud integration, testing, debugging, and system reliability.
- Applied Agile/Kanban practices, Git-based collaboration, technical documentation, and CI/CD concepts during project delivery.
- Presented at Unitec Showcase and received Best Project recognition.

### AWS Hackathon – GenAI Project

- Led development of a serverless chatbot using AWS Lambda, Bedrock, and API Gateway.
- Practiced pair programming, code reviews, and rapid prototyping to deliver a production-ready solution in under 24 hours.

### Rent Everything App

- Built full-stack Android platform with Firebase Realtime Database backend.
- Implemented authentication workflows, role-based access, and dynamic rental logic.
- Guided team on version control, CI workflows, and integration testing.

### Additional Projects

Built web and software projects including client websites, Java Inventory Management with CRUD, ASP.NET MVC applications, and REST API integrations using HTML, CSS, JavaScript, C#, Java, SQL, and GitHub-based deployment workflows

## EDUCATION

### Bachelor of Computing Systems

Unitec Institute of Technology | Auckland, NZ
July 2022 – July 2025

Specialisation: Web & Software Development

## CERTIFICATIONS

- Microsoft 365 Fundamentals: Certificate
- AWS Hackathon 2024 - GenAI Project (Lambda, Bedrock, API Gateway): Certificate
- Microsoft Learn: Profile

## ACHIEVEMENTS & PERSONAL DEVELOPMENT

- Presented PiLot Autonomous UGV at Unitec Showcase and received Best Project recognition.
- Represented Unitec as a delegate at the NZ Prime Minister's Welcome event.
- Active Toastmasters member, building confidence in technical communication and presentation.
- Committed to continuous learning across full-stack development, cloud platforms, automation, and AI-assisted engineering.
